

NIMS Training Tracker & Credentialing System

- Internet access from desktop, laptop, tablet, or smart phone.
- Easily maintained training and credentialing format suited to all responders at all levels.
- Consolidated training provider records of over 2,500 courses from a dozen federally recognized organizations.
- Recognizable academic format: Students, Principals, Administrators, and Coordinators repeating the Incident Command core structure.
- Learning Plan course selection optimization to achieve specific credentials for each Student.
- Operational report generation to summarize credentials, transcripts, and Learning Plans for each responder and team.
- Intuitive program navigation.
- Data security enabled with double verification protocols.
- Serving as a missing-link for Credentialing purposes by compiling course completions from all providers.
- Reducing data management time requirements, instilling a sense of responsibility, accuracy, and accountability.

NIMS Training Tracker & Credentialing System

Emergency Preparedness Optimization

The **NIMS Training Tracker & Credentialing System** platform brings together three critical aspects:

1. Federally recognized training options compiled by provider, course, and delivery method,
2. FEMA approved position qualifications (Credentialing),
3. Tracking individual Learning Plans to verified Transcripts.

Presented in the format of a single online service with unprecedented in immediacy access to team member training data provides exceptional maneuverability in achieving optimization of your team's response preparedness goals.

Due to a double verification principle, individual Transcripts serve as a reliably accessed and verified data source to make informed decisions for your emergency response crew configuration to be adapted to unforeseen disaster event needs.

Credentialing

Credentialing addresses education, training, experience, physical and medical fitness, professional and technical licenses and certifications to demonstrate professional preparedness to operate as a member of the emergency response team.

The Federal Emergency Management Agency (FEMA) National Integration Center (NIC) developed the online Resource Typing Library Tool (RTL), representing Job Titles and Position Qualifications used for inventorying, credentialing, and qualifying of personnel. Credentialing is essential in validating the identity and attributes (e.g., affiliations, skills, or privileges) of emergency response personnel. The **NIMS Training Tracker & Credentialing System** integrates RTL position qualifications into the Learning Plan and Transcript format to give clients a clear picture of training, fitness, and education needed by each responder to perform specific tasks.

Over 3,000 courses from 15 providers have been integrated into the platform's structure giving clients rapid access to specific training events and needs to perform the position's responsibilities. All verifications of training are electronically confirmed by the Student's Principal in the Authority Having Jurisdiction. Student transcripts are accessible on-demand and over the internet to authorized users.

Structure

All Faculty in the **NIMS Training Tracker & Credentialing System** are also Students having a Principal. Administrators from each Department of the Organization are led by the Coordinator. The platform ensures double verification of qualifications with online security features, available to authorized users from the organization's offices, responders on the road, or an incident command site; with an internet connection using a desktop computer, laptop, tablet, or smart-phone. Verified Transcript data link the responder to their credentials.
